

PERSONAL INFORMATION

Full name **LU HONG HAI**
Date of birth: March 17th, 1988
Marital status: Married

Nationality: Vietnam
Email: luhonghai@gmail.com
Personal website: <http://luhonghai.info>
Linkedin: <https://www.linkedin.com/in/luhonghai>
Telephone: +84 (0) 986 899 787
Address: No.3 58/3 Tran Binh, Mai Dich,
Cau Giay, Ha Noi

Current Occupation: Senior Software Developer

BRIEF INFORMATION

A senior developer with around six year experiences in IT domain. Broad understanding and in-depth experience in Object-oriented programming (OOP), Java is primary language.

Experiences:

- Both front-end and back-end web development.
- Mobile (Android, iOS) development.
- Desktop application development.
- Voice recognition and analyzing.
- Big data, Machine learning.
- Amazon Web Service, Google Cloud computing.

Good command of English.

Strong in researching, analyzing, presentation, Continuous Integration process and teamwork skills.

Interested in strategy and data analysis.

EDUCATION

2003 - 2006	Lam Son Gifted High School	Thanh hoa, Vietnam
2006 – 2011	Hanoi University of Science and Technology Faculty of Mathematics and Computer Science	Hanoi, Vietnam
2009 – 2013	FPT Aptech Software Engineering	Hanoi, Vietnam

SKILLS

Issue tracking: Atlassian Jira.
Continuous Integration: Atlassian Bamboo (primary), Jenkins, Hudson, Travis.
Version control: Git (primary), SVN.
Operate system: Mac OS X (primary), Linux, Windows.

Programing language:	Java (primary), Objective-C, Swift, Javascript, HTML, PHP, Ruby, Python C#, C, VBA, Bash.
IDE:	IntelliJ IDEA (primary), Android Studio, XCode, Eclipse, Netbean.
Build tool:	Maven, Ant, Gradle, Rake.
Database:	MSSQL, MySQL, Oracle, SQLite, Realm, MongoDB, DynamoDB.
Office tool:	Microsoft Word, Excel, Powerpoint, Visio, Project.
Design tool:	Adobe Photoshop, Adobe Illustrator.

WORKING EXPERIENCES

2011 - 2014	Claybourne McGregor (C-MG)	Hanoi, Vietnam
Position:	Developer	
Job Description:	<p>Maintain BP Pensionline system and develop new system for BP from the beginning of 2012 called BP Pablo.</p> <p>Lead, develop and maintain a training requirements mapping automation tool for BP Upstream.</p> <p>Write document, setup and guide team to apply Continuous Integration process, move from SVN to Git, upgrade Issus tracking system and build tool (Jira, Bamboo, Github).</p> <p>Investigate and apply Amazon Web Service, Machine learning, Digital signal processing for pronunciation application called accenteasy®.</p> <p>Work on some projects use Google Cloud Computing (Google App Engine), Android and iOS application.</p>	
2015 - Present	Claybourne McGregor (C-MG)	Hanoi, Vietnam
Position:	Senior Developer	
Job Description:	<p>Lead, design, develop and maintain accenteasy® Administration server, accenteasy® Android and accenteasy® iOS application.</p> <p>Train fresher Android and iOS developer.</p>	

ATTENDED PROJECTS

2011 - 2012	CMG Future Monitor™
Project URL:	http://monitor.c-mg.com
Position:	Developer
Responsibilities:	<ul style="list-style-type: none"> - Development - Deployment
Project description	<p>The "Future Monitor™" works by constantly monitoring reports running on multiple servers, which it collates into a central server to check and compare their health. Each server runs a number of local health checks and provides advance warning, through an alert to the systems operations team, if the server appears to be underperforming. A unique characteristic of this system is it does not inundate you with alerts, but intelligently notifies you only when a key threshold is met or an event has changed status.</p>

Programming languages: Java

Technologies: Google App Engine, JPA, JDO, Memcache, Maven

2012 - Present**Continuous Integration (CI) process**

Position: Team leader, developer

Responsibilities:

- Research, manage and apply Continuous Integration process tool
- Improve development process
- Refine project structure
- Write custom build plugin, automation build script.

Technologies: Atlassian Jira, Atlassian Bamboo, Github, Maven, Gradle, Rake, Amazon Web Services.

2012 - 2015**BP PensionLine – Self-Service Financials**

Client: BP Pension

Project URL: <https://pensionline.bp.com>

Position: Developer

Responsibilities:

- Maintain and fix bugs.
- Develop new feature
- Improve build script and process
- Report development status to manager

Project description: BP Pensionline is a feature rich site that allows over 60,000 members to manage their contributions in a secure self-service environment. It is worth well over £13.8 billion GB Pounds.

Specifically responsible for the following tasks:

- Rewriting Sarbanes Oxley (SOX) compliant security and login module.
- Business continuity plan – regression, load and penetration testing as well as backup.
- Financial calculation fixes and adjustments to Aquila's financial calculations.
- Business requirements gathering and documentation, RUP methodology.
- Development of Model View Controller (MVC), JSPs and flow handlers into a "skin-able" site.
- Advise on Data Protection Act and user demographics.
- Development of demographics gathering and report generation via WebTrends and data-mining.
- Financial payslips forecasts, implementing A-day tax calculations.
- Automated PDF generation of on-line documents from data held in database via XSLT and FOML.
- Reporting to risk and review committee.
- Automated test regression harness for financial calculations

Programming languages: Java, HTML, Javascript, CSS, SQL

Technologies: OpenCMS, ISAPI, JBoss AS, MSSQL Server, Ant

2012 – 2015**BP Pablo**

Client: BP Pension

Project URL: <https://plw1-prd.bppensions.com/pablo/content>

Position: Developer

Responsibilities:

- Develop
- Maintain and fix bugs.
- Improve build script and process

- Report development status to manager

Project description: BP Pensionline requires an internal Continent Management System, project name: Pablo. The system has to have BP branding and security.

Programming languages: Java, HTML, Javascript, CSS, SQL

Technologies: OpenCMS, ISAPI, Tomcat, MSSQL Server, Ant

Jan 2013 **BP Pensionline Mobile: Newsletter**

Client: BP Pension

Project URL: [Google Play](#)
[App store](#)

Position: Team leader / Developer

Responsibilities:

- Research framework, tools and API
- Design architecture, create development plan
- Create project structure, automation build script
- Develop
- Distribute
- Version control
- Report development status to manager

Project description: Newsletter - PDF reader that lets user list, download and read newsletters from Pensionline system.

Programming languages: Java, Objective-C

Technologies: Android, iOS, Maven

Jan 2014 **Hipspot**

Project URL: [Google Play](#)

Position: Developer

Responsibilities:

- Develop
- Support team members

Project description: A social mobile application to find persons in range, then user could send request to meet for a coffee or others...

Programming languages: Java

Technologies: Android, Maven

Dec 2013 **BP Upstream - training requirements mapping automation tool**

Client: BP Upstream

Position: Team leader / Developer

Responsibilities:

- Create development plan
- Create project structure, automation build script
- Develop
- Deliver
- Version control
- Report development status to manager

Project description: Working with lead consultants from Accenture and Harvey Nash to disseminate their process to automate mapping 5,000 contractors and employees to specialisms in upstream (Azerbaijan, Gulf of Mexico & North Sea).

The tool selects various methods to map the users to their specialisms and plugs the ETL integration issues from their HR SAP, LDAP (MS Active Server) data.

Programming languages: VBA, SQL

Technologies: MS Access, MSSQL Server

Aug 2014

accenteasy®

Project URL: <http://www.accenteasy.com>
[Google Play](#)
[App store](#)

Position: Team leader / Senior Developer

Responsibilities:

- Research technology, tools and API
- Design architecture, create development plan
- Create project structure, automation build script
- Develop
- Distribute
- Version control
- Report development status to manager

Project description: Machine learning and natural language processing (NLP) company accenteasy shared their expertise with Education Ministers on their 2020 English language project. The aim of Project 2020 is to improve English language standards in Singapore, Malaysia and Vietnam by 2020.

Accenteasy built a tool to harvest words spoken with a British (RP) accent and used deep learning to classify features in the digital signals of these words. Machine learning was used to develop the ultimate version, which can identify when speakers veer away from the RP accent.

Personally responsible for:

- consulting on machine learning techniques
- designing algorithms to analyze pitch, power and pace
- meetings with Education Ministers in Vietnam and UK Trade and Industry
- establishing a team of linguists and deep learning experts in Singapore and Vietnam
- strategy for delivering access to back-end through SaaS
- edutech to harvest data-sets to train machine learning models and proving statistical accuracy

Programming languages: Java, Swift, Python, HTML, CSS, SQL

Technologies: Android, iOS, Digital signal processing, Machine learning, Google Tensorflow, Load balancing, Auto Scaling, Amazon Web Services, JPA, JDO, Datanucleus, MySQL, Maven, Gradle.

Dec 2014

録音ラジオサーバー (Radio Server)

Project URL: [Google Play](#)

Position: Senior Developer

Responsibilities:	<ul style="list-style-type: none"> - Research technology, tools and API - Design architecture, create development plan - Create project structure, automation build script - Develop - Distribute - Version control
Project description:	A 200+ concurrent users Android application to play, record a radio broadcast of NHK and other channels.
Programming languages:	Java, PHP, C, C++
Technologies:	Android, JNI, RTMP protocol, PHP

May 2015

Global Translator

Project URL:	Google Play
Position:	Senior Developer
Responsibilities:	<ul style="list-style-type: none"> - Create project structure, automation build script - Develop - Distribute - Version control
Project description:	<p>Global Translator, easy to use and quick texts. Ideal to wear on mobile or tablet. Translate to and from over 40 different languages and pronounces the words written for better understanding.</p> <p>Global Translator also contains the ability to read text using the device camera, listening text into the microphone.</p>
Programming languages:	Java, C, C++
Technologies:	Android, OCR, JNI

Oct 2015

Vietcomic

Project URL:	Amazon App Store
Position:	Senior Developer
Responsibilities:	<ul style="list-style-type: none"> - Research technology, tools and API - Design architecture, create development plan - Create project structure, automation build script - Develop - Distribute - Version control
Project description:	<p>Vietcomic is one of the best tools for both Vietnamese children and adults. People can enjoy Vietcomic with unlimited manga and anime.</p> <p>Some advantaged functions:</p> <ul style="list-style-type: none"> - Unlimited updated comics, manga and anime. - Allow users to download and read offline - Scheduled download your books, do not need to wait to enjoy - Various types of comics, manga for both children and adults.
